Work Experience

Product Development Manager & Developer, [PICTUS](#)

January 2018 - October 2024

- Responsibilities included managing the requirements gathering, design, planning, development, and release process with regular client communication and leading a 4 person team.
- Implemented and documented new software architecture patterns including defining our frontend component library, permissions system, and the structure of our business logic in the backend.
- Designed and implemented an asynchronous job center for running and managing reports and long jobs.
- Built a front-end for managing the thousands of rows of data collected during the recycling process for multiple programs in multiple provinces so that recycling claims could be submitted.
- Redesigned and developed a custom bulk communication service for communicating with businesses using various filters and parameters.
- Solely developed the front end for a client portal.
